Dear Professor,

I would like to inform you that I have completed the theoretical part of my master's thesis, including the literature review, research gap identification, and system design. I am currently working on the practical implementation and experimental evaluation of the proposed system.

I have attached my current report for your review. I would greatly appreciate it if you could provide your feedback, particularly regarding the structure, clarity, and technical directions before I proceed further with the practical phase.

Additionally, I could not find a section in the portal to upload the progressive report. Could you please advise whether I should submit it at this stage or only after completing the full thesis? RaTSiF-2026

I am also preparing my RaTSiF-2026 presentation, including these details, and I will share it with you within the next few days.

Thank you very much for your guidance and support.

Kind regards,
Pramod Sandaruwan

Dear Pramod,

Now the presentation is the task No 1. I want to see it before the Monday.
The system assumes only full final version of MSc theses for uploading.
So, today the presentation is the main.

Best regards,

Professor, Dr.sc.ing. Alexander Grakovski

Dear Professor,

Please find attached the draft RaTSiF presentation. I kindly request your feedback and any corrections.

In the past weeks, I have been attending Embedded Systems lectures conducted every Wednesday. I would like to ask about the possibility of consulting with you on the 22nd (Wednesday) or any later convenient date.

Best regards,
Pramod

Dear Pramod,

Please, add into the slides some pictures (scheme of experiment, antenna form and diagram), graphs to alive the presentation form typical GPT generated died text :)

Best regards,

Dear Professor,

Thank you for your feedback. I've updated the slides with diagrams and graphs. Please find the revised PDF attached.

Best regards,
Pramod

Dear Pramod,

It's better but not enough. My proposal:

1. To add slide No 2 - picture with the problem description (object localization).
2. Then slides 4,5, after -2,3.
3. Slide 12: increase the graph (designation of both curves) and add the table with numerical data for comparison of your approach with single sensor measurements or with/without the network for prediction. How changes the results (errors)?
4. You need to be able to explain the architecture and tools of realization of Temporal Convolutional Network, learning datasets and results, to provide the confusion matrix (Accuracy, Precision, Recall, F1), Kalman filter realization and parameters, etc.

Best regards,

Professor, Dr.sc.ing. Alexander Grakovski

Dear Professor,

Thank you for your feedback. I have updated the presentation accordingly and attached the new version.

Best regards,
Pramod

Ok, now it is good!

Please, try to compress your oral presentation till 10-12 min. Make the training before the mirror or through the recording of it.

Best regards,

Professor, Dr.sc.ing. Alexander Grakovski

Dear Professor,

Thank you, I will shorten the presentation to 10–12 minutes and practice it.

Best regards,
Pramod
